

Covid19 social story
Help stop Coronavirus

Help stop Coronavirus spreading

Coronavirus is an illness that makes some people unwell.

There are some things I can do to help stop Coronavirus.

Washing my hands:

I

should

wash my hands

after I

go to the toilet.

I should

wash my hands

(please enter realistic and appropriate

measure

of time e.g. after each lesson, once an hour etc) even if I

have not

been to the

toilet.

I should

wash my hands

before

and

after

I

eat.

1

2

One

or

two

pump of

soap

is

is enough.

I will

use

warm water.

30

I will spend 30 seconds washing my hands. (Amend to a meaningful measure of time such as two verses of happy birthday or else provide a timer.)

I will dry my hands after I have washed my hands.

Using hand sanitiser

I can use hand sanitiser.

1

One pump of hand sanitiser is enough.

I should rub it in well so my hands don't feel wet or slippery.

Keeping things away from my mouth

I should try not to put my hands or fingers in my mouth.

I should try not to bite my nails.

I should try not to lick, chew or suck things that

someone else

might

touch.

If I need to lick, chew or suck something it must be kept

in

my

pocket

when I'm

not

using it.

I must not

share

the

things

that I

lick,

chew

or

suck.

Me or my adults should

wash

the

thing

that I

lick,

chew

or

suck a few times a day.

I must try very hard

not

to

spit.
